微信终端开源数据库 WCDB

数据库修复与无感迁移方案

- 代码耦合
- 并发性差
- 健壮性差

Write Where 无感迁移方案 ?

让开发者以迁移完成为假定前提进行开发

// 旧表

```
CREATE TABLE oldTable(identifier INTEGER,  
                        content TEXT)
```

// 新表

```
CREATE TABLE newTable(identifier INTEGER,  
                        content TEXT)
```

```
SELECT identifier, content FROM newTable LIMIT 1
```

```
SELECT identifier, content FROM unionedView LIMIT 1
```

```
CREATE TEMP VIEW unionedView AS  
  SELECT * FROM oldTable  
  UNION ALL  
  SELECT * FROM newTable
```

```
WITH cte(t) AS (SELECT max(t) FROM t WHERE t LIKE  
"DELETE") UPDATE t.t SET t=(SELECT sum(t) FROM other.t  
WHERE cte.t="t" and main.t="INSERT")
```

- schema 名
- 字段名
- 临时字段
- 字符串
- 其他数据库的表名
- 当前数据库的表名

```
/* WINQ: WCDB 语言集成查询 */  
var column = Column(named: "t")  
var table = TableOrSubquery("t");  
  
// SELECT sum(t) FROM t WHERE t > 1  
var select = StatementSelect()  
    .select(column.sum())  
    .from(table)  
    .where(column > 1)
```

```
INSERT INTO newTable VALUES(1, "Hello, WCDB")
```

```
SAVEPOINT
```

```
INSERT INTO oldTable VALUES(1, "Hello, WCDB")
```

--保存 lastInsertedRowID

```
INSERT INTO newTable(rowID, identifier, content)
  SELECT rowID, identifier, content
  FROM oldTable
  WHERE rowID = lastInsertedRowID
```

```
DELETE FROM oldTable
  WHERE rowID = lastInsertedRowID
```

```
UPDATE newTable SET content = "Hello, WCDB"  
WHERE identifier > 10
```

```
SAVEPOINT  
UPDATE oldTable SET content = "Hello, WCDB"  
WHERE identifier > 10  
  
UPDATE newTable SET content = "Hello, WCDB"  
WHERE identifier > 10  
  
RELEASE
```

```
DELETE newTable WHERE identifier > 10
```

```
SAVEPOINT
```

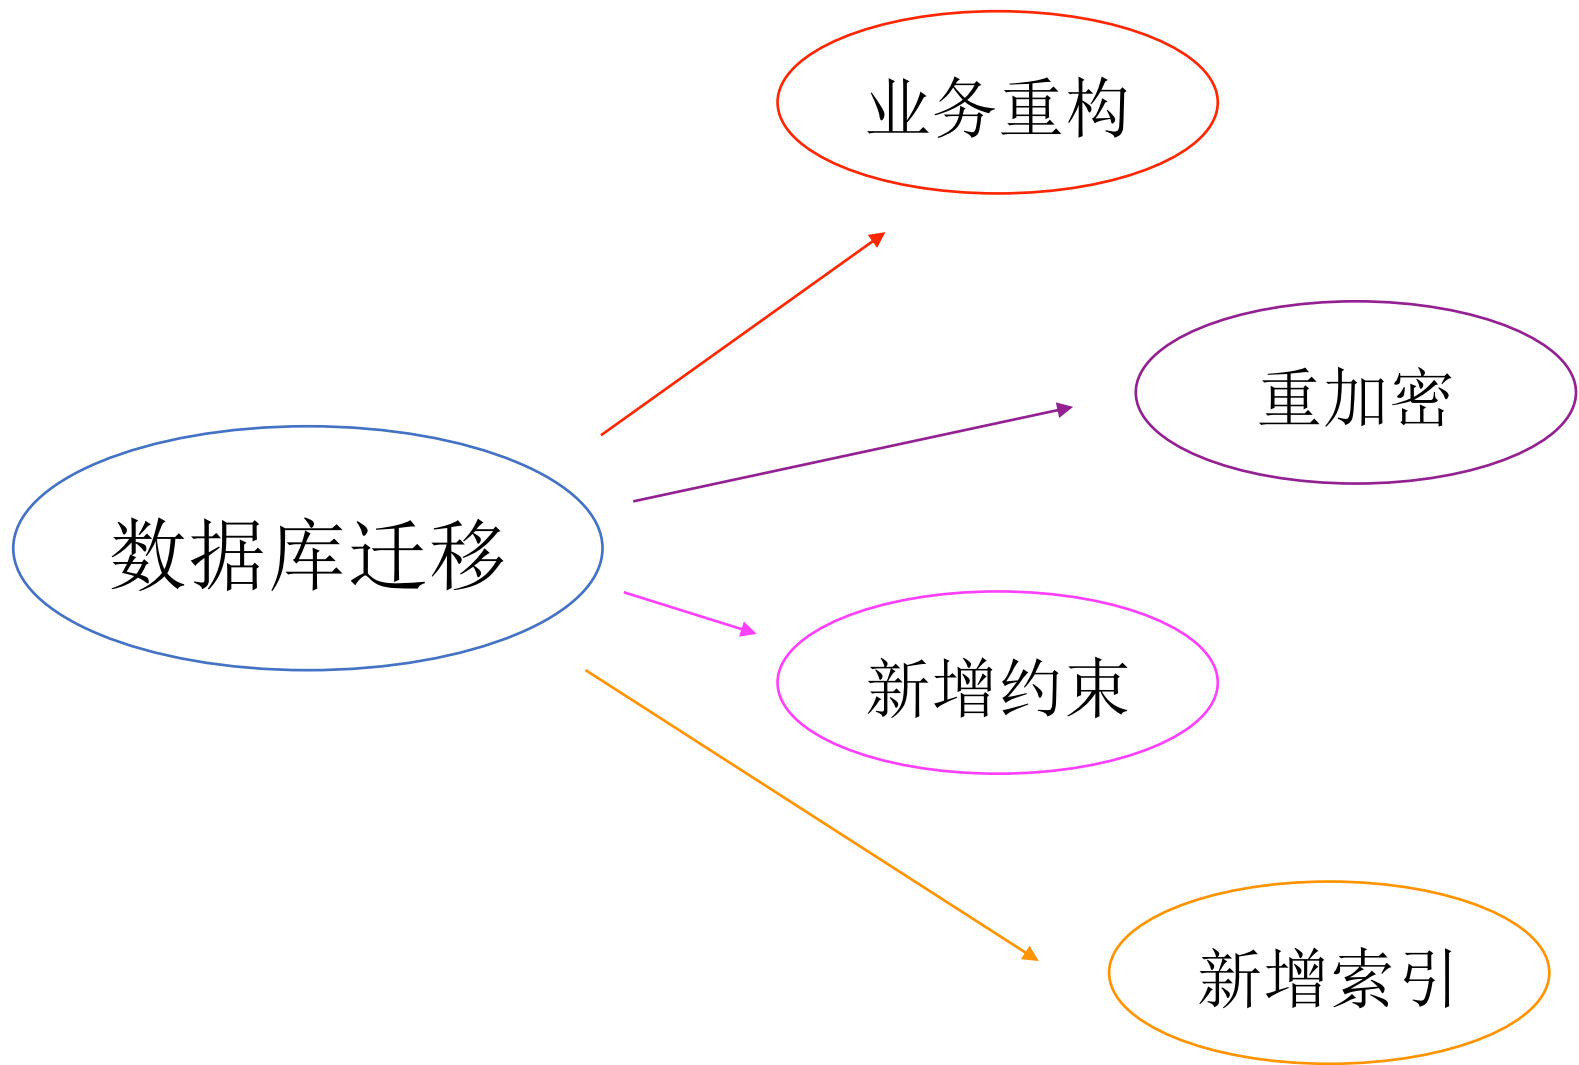

```
UPDATE FROM oldTable WHERE identifier > 10
```

```
UPDATE FROM newTable WHERE identifier > 10
```

```
RELEASE
```

```
- var database = Database(withPath: oldPath)
+ var database = Database(withPath: newPath)
+ database.filterMigration({ (migrationInfo) in
+     if migrationInfo.targetTable == "newTable" {
+         migrationInfo.sourceTable = "oldTable"
+         migrationInfo.sourceDatabase = oldPath
+     }
+ })
- var *table =
-     database.getTable(named: "oldTable");
+     database.getTable(named: "newTable");
```

- 代码耦合

- 并发性差

- 健壮性差

可规避:

SQLite 使用不当

.....

难以规避:

内存野指针

文件错写

.....

无法规避:

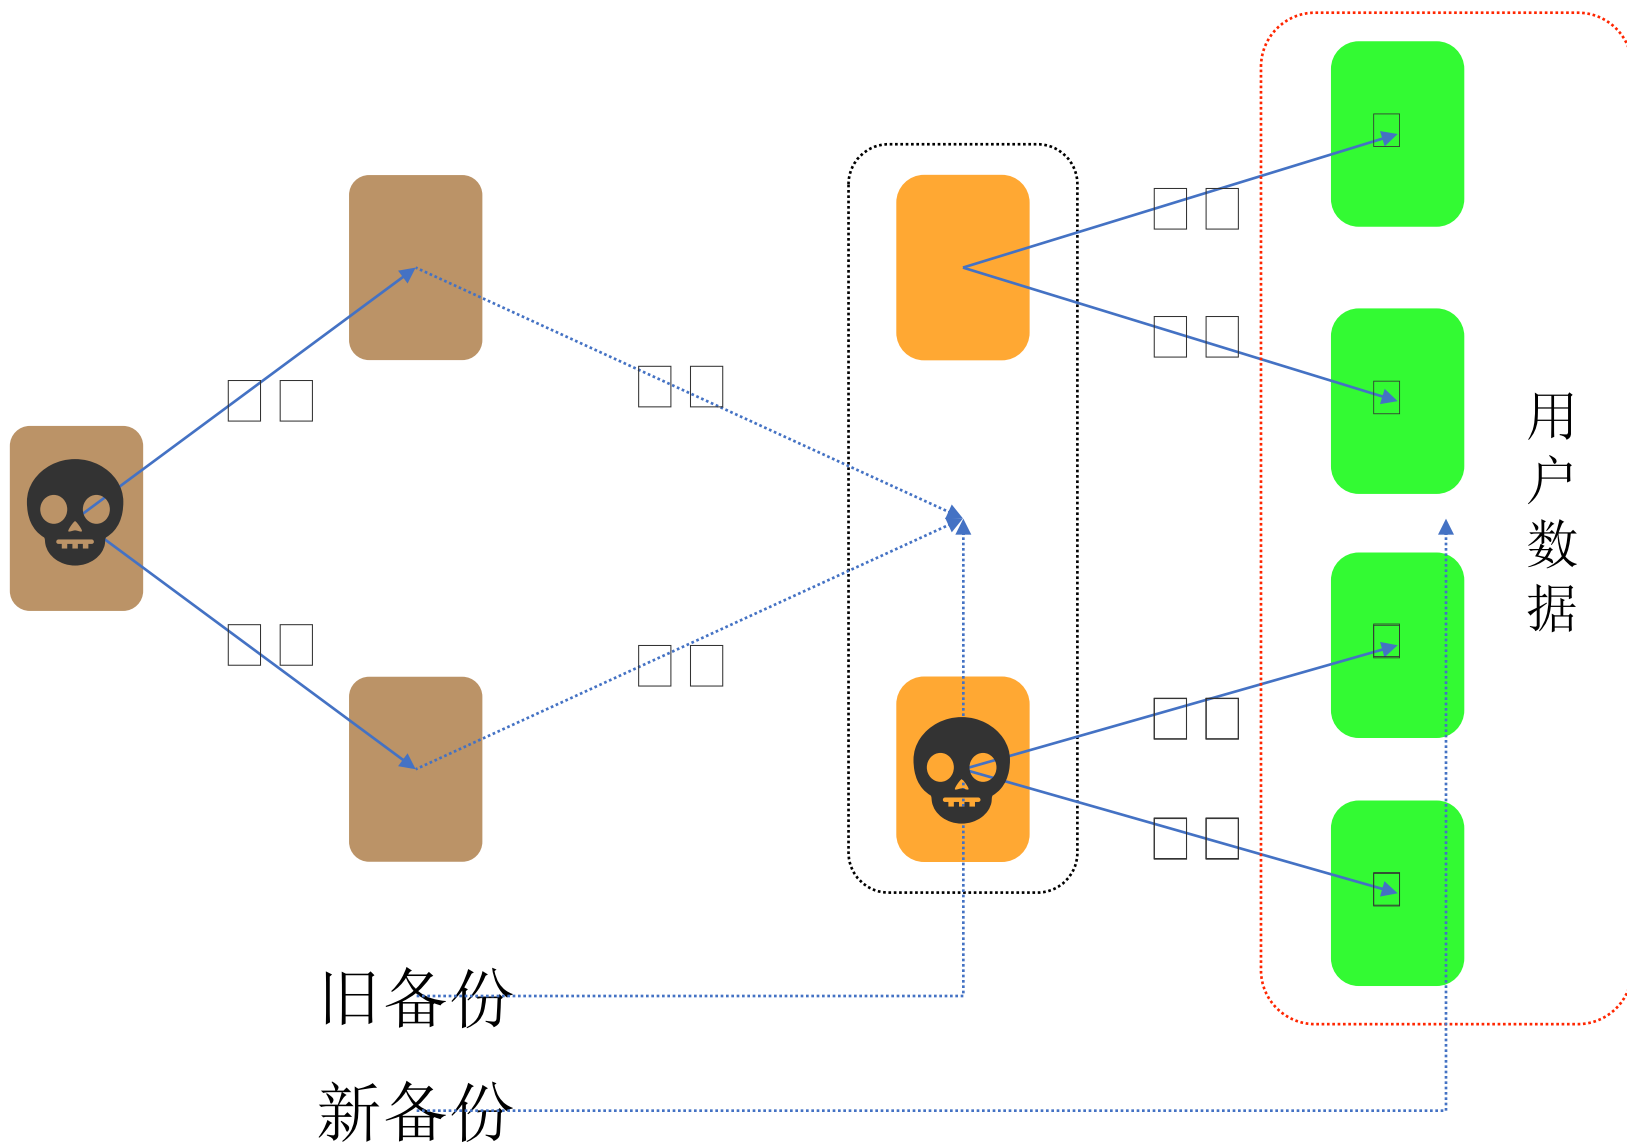

文件系统错误

磁盘损坏

.....

master 表

用户表

I/O ————— mmap

- 分段
- 按需
- LRU
- 引用计数

内存 ————— 事务化备份（文件不会变化）

$$\text{修复率} = \frac{\text{修复成功的页}}{\text{应该修复的页}}$$

$$= \frac{\text{修复的叶子页数} * \text{修复的 Cell 权重}}{\text{叶子页或未知页的总数}}$$

= 96.71%

微信终端开源数据库 WCDB

无感迁移方案

- 非阻塞迁移
- 方便接入
- 性能损耗小

新修复方案

- 高效
- 修复率高

[https://github.com/Tencent/](https://github.com/Tencent/WCDB) WCDB

[https://github.com/Tencent/](https://github.com/Tencent/MMKV) MMKV

MMKV

- key-value 组件
- mmap/protobuf
- 微信上稳定使用 3 年多
- 18 年 9 月对外开源
- 支持 iOS/MacOS/Android
- 小而美（二进制 30KB 左右）

MMKV

```
// iOS
```

```
MMKV *mmkv = [MMKV defaultManager];  
  
[mmkv setObject:@"Hello, MMKV!" forKey:@"string"];  
NSString *str = [mmkv getObjectOfClass:NSString.class  
                                forKey:@"string"];
```

```
// Android
```

```
MMKV kv = MMKV.defaultMMKV();  
  
kv.encode("string", "Hello, MMKV!");  
String str = kv.decodeString("string");
```
